Towards the assurance of transparency and quality of higher education in Ukraine: National Qualification Framework

Iryna Skliar
PhD, Associate Professor, Department of Finance and Entrepreneurship, Oleg Balatsky Academic and Scientific Institute of Finance, Economy and Management, Sumy State University, Ukraine

Abstract
The attractiveness and transparency of higher education depends on complex of factors, which are based on quality assurance. The implementation of these procedures is based on national system of qualifications. The aim of the article is to provide the brief overview of changes in the higher education of Ukraine, especially progress in the implementation of the National Qualification Framework. The analysis of the higher education in Ukraine in dynamics according to indicators characterizing its attractiveness, show the deterioration of the situation. The article presents the analysis of the Plan of implementation of the National Qualification Framework for 2016-2020 in terms of recommendations given since the adoption of the National Qualification Framework by Ukrainian and European specialists in terms of European experience: implementation of the European Qualification Framework for lifelong learning.

Keywords: National Qualification Framework, higher education, learning outcomes, Ukraine, Higher education standards.

JEL Classification: A2, I2, I23.

Higher education in Ukraine: analysis of attractiveness
The system of higher education in Ukraine has gone a long way of development. There is some progress. The legislative framework has been developed: the National Qualification Framework (2011), the Law of Ukraine “On Higher Education” (2014). The process of institutionalization of quality assurance has begun – the National Agency for the Higher Education Quality Assurance has begun to work, projects of higher education standards have been developed. However, the current stage of the formation of the national education system is, in our opinion, decisive. At this stage, it is important to understand the positive results that have been achieved, and the most important is to clearly formulate miscalculations and “tight spots”. The statistics show that they are. One of the most prominent indicators of the attractiveness of Ukrainian higher education is the number of Ukrainian students who prefer studying in their country. Despite the higher cost of education abroad, Ukrainians prefer education in other countries (Fig. 1). Recently, opportunities for education, work and educational mobility have expanded and students show the high exit activity.

Figure. 1 Outbound internationally mobile students
As shown in Figure 1, starting in 2011, the number of people leaving for higher education has increased significantly. Ukraine looks even worse concerning this issue than countries with a similar experience in reforming the higher education systems. Poland shows good progress on this issue. This country has been able to radically change the situation since 2010. HEIs in Poland offer over 400 English-language educational programmes (Bachelor, Master, PhD) [9]. And at present, not only the number of students who leave Poland to study abroad decreases, but also the number of foreign students who wish to study in Poland increases. In 2010 in Poland there were more people who left for studying abroad, while in Ukraine there was a slight excess of those who came over those who left (Fig. 2). And by 2014 Poland had already outrun Ukraine. And in 2016 the number of foreign students is 62054 persons (excluding Erasmus + programmes). Moreover, 53.5% of all foreign students are Ukrainians [9]. As we see in Figure 2, the United Kingdom has indeed created a powerful education system. Higher education in this country has become an export resource. According to the indicator of net flow of internationally mobile students, the United Kingdom almost 40 times exceeds Ukraine [8].

In Ukraine there is also a growing dynamics for the period 2010-2014 (Fig. 2). However, already in 2015 there is a negative value of 2741 persons [8]. This situation is explained by the orientation of Ukrainian students to studying abroad as well as the smaller inflow of foreign students to Ukraine.

![Figure 2. Net flow of internationally mobile students](image)

The structure of the contingent of foreign students studying in Ukraine is indicative from the point of view of the development of higher education, improvement of quality assurance. Figure 3 shows that Ukrainian education is attractive mainly for citizens from countries with a transitory economy (Azerbaijan, Georgia, Turkmenistan, Uzbekistan) or from developing countries (India, Jordan, Egypt, Nigeria, Morocco, China).

![Figure 3. Structure of foreign students learning in Ukraine, 2016](image)
Despite the rather low cost of education, there is no significant increase in foreign students who have expressed the desire to study in Ukraine. Obviously, this situation is caused by many reasons: political instability in the country, economic situation, military actions and other risks. However, in terms of determining further actions for the reform of higher education, it is important to study in detail only one factor: the progress of the education system itself. It is now necessary to answer the question: how much the changes in the system of higher education have made real progress in order to increase the attractiveness of Ukrainian higher education? What components of the national qualification system do not work and why? And what tasks should be solved today at the national and institutional level to change the situation?

**Changes in the Ukrainian system of higher education, their impact**

The process of developing the National Qualification Framework in Ukraine was initiated by the Order of the Ministry of Education and Science of Ukraine No. 602 of July 3, 2008. It was officially approved by the Cabinet of Ministers of Ukraine, Resolution No. 1341 of 23.11.2011 [7]. The main characteristics of the Ukrainian National Qualification Framework:

- qualifications are described in terms of learning outcomes for each educational level;
- contains 4 descriptors (knowledge, skills, communication, autonomy and responsibility) and integral competence;
- allows to coordinate qualifications.

The place of the National Qualification Framework in the National Education Area is determined by the tasks that it has to solve:

- to ensure greater transparency of the national education system, the importance of its qualifications;
- to ensure the unity of the system, the relationship between its levels, coordination;
- to promote the continuity of educational programmes based on the ideology of lifelong learning;
- to promote the recognition of knowledge, skills and competences acquired through nonformal / informal learning;
- to create the tool for ensuring the alignment of educational institutions to external and internal quality requirements;
- to increase the relevance of education and training for society;
- to promote international mobility (of workers, students) by comparing national qualifications with qualifications of other countries.

An Action Plan was developed to implement the National Qualification Framework. This document contained a list of other normative legal acts / orders that need to be developed to ensure full implementation of the National Qualification Framework. It was planned 17 events for 2012-2015. However, in fact, this plan was not implemented for a number of reasons. The main thing is the political changes in the country and the adoption of the new Law of Ukraine “On Higher Education” from 06.09.2014 [6].

This law has significant differences from the previous one:

- academic autonomy. Each HEI has the right to form and implement its own educational and research programmes, and therefore the obligation to ensure the quality of education upon these programmes. This requires a significant change in the approaches to the organization of the educational process;
- new requirements for the quality assurance system at the national and institutional levels;
- independent procedures for assessing the quality of higher education, which essentially introduces competitive principles in the market of educational services;
- change of the defined format of higher education standards.

All these innovations require a radical change in the environment of higher education in Ukraine. These changes should begin with the actual implementation of the National Qualification Framework. Understanding this, the Government of Ukraine approves the Action Plan for the implementation of the National Qualification Framework for 2016-2020 from 14.12.2016 [1]. However, a number of questions arise as to the completeness of a specific list of tasks. For the past six years, the National Qualifications Framework has been adopted. During this period, the experience of using the National Qualification Framework has been accumulated. A number of European projects concerning the implementation of the National Qualification Framework have been implemented. Thus, a detailed analysis of the National Qualification Framework was carried out within the framework of the Twinning project “Development of standards for vocational technical education taking into account the descriptors of the levels of the National Qualification Framework” in 2013. We examined in
detail the expert opinion on the Ukrainian National Qualification Framework (Hanf, Georg, 2013) the views of other experts\(^1\), and analyzed the actions that have been taken over the past three years. Summarizing all this we highlighted the shortcomings and deficiencies associated with the National Qualification Framework and the process of its implementation.

1. **National Qualification Framework** is just as a tool for qualification classification, but not as a tool for comparing them. The framework itself is a useful tool for increasing the transparency of the qualifications system, but in this context, reform processes and their impact on the evaluation, awarding and certification of qualifications are much more important. That is, we are talking about not only the classification and comparison of qualifications (ESG, 2015: 9). Even as an instrument for classifying the existing qualifications the National Qualification Framework is not used. The main reason for this is the lack of a procedure for “official” correlation and allocation of qualifications by the levels of the framework (Hanf, Georg, 2013: 17-18).

2. **Functional limitations** of the National Qualification Framework. The emphasis is on the fact that “The Resolution of the Cabinet of Ministers of Ukraine determines what the frame will be used for, but does not prescribe how it will be used. Consequently, the Ukrainian National Qualification Framework can be characterized as a rather “free” framework” (Hanf, Georg, 2013: 11). Among such functional problems, particular attention is paid to the fact that there are no defined tasks related to access, transfer, continuity of learning, recognition of learning outcomes acquired as a result of nonformal / informal learning. It is also not about the responsibility of educational institutions (qualification providers) for the quality (process and results) of educational services provided by them. As the expert points out, “it seems like “lifelong learning”, which underlies the European Qualification Framework, is not an important part of the Ukrainian National Qualification Framework” (ESG, 2015: 10). It is also not defined how the process of interaction between different levels of education within the qualification system will take place and how the Ministry of Education and Science of Ukraine and the Ministry of Social Policy of Ukraine will communicate and cooperate. This issue needs to be finalized in other documents (Hanf, Georg, 2013: 11).

3. **Lack of principles and procedures for the inclusion of qualifications** in the National Qualification Framework. These principles and procedures are mandatory, without them the National Qualification Framework functions as a tool for ensuring the unity of the education system and its transparency. Procedures for including qualifications in the National Qualification Framework should be implemented along with the matching procedure, which allows to associate particular qualifications with a certain level of the framework. Comparison means checking the alignment of qualification (type) with descriptors of learning outcomes of a certain level. Thus, the transparency of the qualification system for all types of qualifications is achieved, and the links between qualifications become clearer. To provide these procedures, it was proposed to create a manual with instructions for the future allocation of qualifications, as well as register of qualifications (Hanf, Georg, 2013: 21).

4. **The problem of common language.** National Qualification Framework should provide a common language for all stakeholders - the language of learning outcomes. Experts emphasize the need for a clear, consistent, approved terminology. Such a conclusion is made on the basis of analysis of official Ukrainian documents (Regulations on the approval of the National Qualification Framework and other regulations), where there is “certain inconsistency” (Hanf, Georg, 2013: 12). Approval of terminology, its harmonization is an obligatory element of the process of implementation of the National Qualification Framework. This terminology should become the language of official documents. To achieve this it was suggested: 1) to create an integrated glossary (Hanf, Georg, 2013: 13, 19) based on which to review documents related to the implementation of the National Qualification Framework, 2) a website of the National Qualification Framework, which would include information for all stakeholders and contributed to the clarification of qualifications, their connection, recognition, etc.

5. **Learning outcomes in the educational process.** The lack of a learning outcomes mechanism makes it impossible to fully implement the National Qualification Framework. The European Qualification Framework recommendation makes clear that the qualification to be included in the framework should be described in the categories of learning outcomes. Most existing qualifications in Ukraine do not have such a description. Consequently, it is doubtful whether they should be compared with the National Qualification Framework and included in it (Hanf, Georg, 2013: 21). A number of decisions should be taken: What qualifications should be included? Who will make a comparison? How to do this?

---

\(^1\)Ukrainian-Polish project “Innovative University and Leadership”, TEMPUS ALIGN project “Achieving and checking the alignment between academic programmes and qualification frameworks”
6. **Change in approaches to teaching** (Hanf, Georg, 2013: 7). Not only teaching methods need to be changed. Implementation of the approach based on learning outcomes is a task that involves a set of procedures that need to be changed or improved at the institutional level (HEI-level).

7. **The problem of administration and coordination.** According to G. Ganf, “Ukrainian National Qualification Framework is developed as a comprehensive framework that includes all qualification sectors: general education, vocational education, higher education, (future) professional qualifications. To unite all sectors “in one”, an appropriate management / administration structure is needed (Hanf, Georg, 2013: 24).

Consequently, it can be stated that there is currently no progress in the implementation of the National Qualification Framework in Ukraine. As a confirmation, let's quote G. Ganf “at the moment, the Ukrainian National Qualification Framework as a qualification classification tool is similar to an empty shelf of 10 levels, with 4 divisions at each level. Qualifications are not yet officially distributed” (Hanf, Georg, 2013: 21). From the moment of this statement in this area, nothing has changed de facto. On the contrary, the list of tasks expanded and complicated with the adoption of the Law of Ukraine “On Higher Education”. Recognizing this, the Cabinet of Ministers of Ukraine approved the Action Plan for the Implementation of the National Qualification Framework for 2016-2020, Order No. 1077-p of December 14, 2016. The question is: How effective and useful the implementation of the National Qualification Framework will be according to this plan? Are remarks made by European experts and Ukrainian specialists taken into account?

**Action Plan for the implementation of the National Qualification Framework for 2016-2020: perspectives and challenges**

The plan provides 25 events within 7 generalized blocks (Table 1 – see Appendix). It is obvious that much work has been planned on the implementation of the National Qualification Framework, a lot of recommendations have been taken into account when drafting this document. However, a number of questions arise as to the sequence of proposed measures, as well as to their completeness and content. We will try to analyze the proposed Plan for the implementation of the National Qualification Framework for 2016-2020 in two contexts: 1) in the context of recommendations for the removal of shortcomings that have been expressed since the adoption of the National Qualification Framework by Ukrainian and European experts and tasks defined by the Law of Ukraine “On Higher Education”, and 2) in the context of European experience: implementation of the European Qualification Framework for lifelong learning.

A detailed analysis of the Action Plan gives grounds for highlighting such remarks.

*Events are not always consistent in time.* As of 2016, when the Plan was approved, there has already been an understanding of certain omissions in the National Qualification Framework itself. Logically, it would be a start-up step to determine exactly how to make changes to the current edition of the National Qualification Framework, and to plan all subsequent measures based on the updated content. Herewith the current Plan provides the revision of the National Qualification Framework in 2020. In addition, the main contradiction lies in our view in Action 22 “Alignment of the National Qualification Framework to the EQF LLL”, the actual measure as it is, and the term for its implementation - 2018-2020. For 2018-2019 the task is “to conduct the analysis of the alignment of the National Qualification Framework with the criteria of the European Qualification Framework for lifelong learning”. If the results of the analysis reveal misalignment (and this is likely because there are already some discrepancies in the information available), how can one explain that by the moment other tasks provided by the Plan have already to be completed? Such inconsistency makes it difficult to carry out current tasks. Their implementation will be based on the current edition of the National Qualification Framework. In particular, the standards of higher education currently under development must be consistent with learning outcomes of the National Qualification Framework. Upon completion of this complex, longstanding and important work in terms of establishment of the national system of qualifications, the issue of alignment of standards with the basic document of the National Qualification Framework will be raised.

*Common Speech.* In our opinion, a rather urgent task to be solved through the implementation of the National Qualification Framework is not fully resolved when developing the Action Plan. European experts who work in Ukraine on projects of the European Commission, emphasize on the terminological inconsistency. The terminological inconsistency with the adoption of the Law of Ukraine “On Higher Education” has not decreased, but rather increased. The definition of basic concepts of learning outcomes and competencies in the

---

2TEMPUS ALIGN project “Achieving and checking the alignment between academic programmes and qualification frameworks”
National Qualification Framework\(^3\) and the Law\(^4\) is different. The Action Plan doesn’t provide creating an integrated glossary, which was recommended.

**Administration and coordination remain relevant.** The reestablishment of the Interdepartmental work group does not solve the issue of a permanent coordinating structure. The creation of a subcommission within the framework of the Scientific and Methodological Commission 15 of the Ministry of Education and Science of Ukraine also does not fully solve this issue, since this commission has in fact no regulatory powers. In some countries, institutions have been set up to support the implementation of the National Qualification Framework, as a rule, National coordination points. The list of tasks faced by these institutions is quite broad from coordination (if only National Qualification Framework functions as a means of ensuring transparency, providing communications of the stakeholders) to ensuring quality, recognizing results of nonformal and informal learning, as well as the development of new professional standards and qualifications of vocational education (Hanf, Georg, 2013: 24).

**Need for procedures of partial qualification recognition.** This task should also be solved in the process of implementing the National Qualification Framework. Among the planned list, we have not found the task of developing the recommendation for partial recognition of qualifications. Meanwhile, it is provided by recommendations for the implementation of EQF LLL.

**Parallel development of Learning outcomes-based instruments.** The experience of implementing the EQF shows that the effectiveness of this process depends on the parallel development of Learning outcomes-based instruments, in particular ECTS, ECVET – The European Credit system for Vocational Education and Training, and the European key competences framework). The Action Plan does not provide anything for the development of these tools.

In addition to these omissions, we especially want to emphasize the main, as we consider, task of introducing the National Qualification Framework - reorienting the educational process to the learning outcomes and thereby causing a change in pedagogical approaches. National Qualification Framework form the basis on which the whole complex of processes should be built (Fig. 4). It creates boundaries, but the educational process is implemented at the basic level - at the level of a specific educational programme. And the real process of implementing the National Qualification Framework takes place at the level of a specific educational programme.

---

\(^3\)National Qualification Framework: **learning outcomes** - competencies (knowledge, understanding, skills, values, other personal qualities) that a person acquires and / or is able to demonstrate upon completion of training;  
**competence / competences** - the ability of a person to perform a certain type of activity, expressed through knowledge, understanding, skills, values, other personal qualities.

\(^4\)Law of Ukraine on Higher Education, art. 1: **learning outcomes** shall mean an aggregate of knowledge, abilities, skills and other competencies that students have attained in a set of educational experiences under a particular vocational or academic programme which may be identified, numerically assessed and measured;  
**competency** shall mean a dynamic combination of knowledge, abilities and practical skills, thinking patterns, professional, world-conceptualizing and civic qualities, moral and ethical values that defines an individual’s capability to successfully engage in professional activity and further learning and is a result of learning at a particular level of higher education.
The need for changing teaching and learning methods, rethinking approaches to assessment is now extremely urgent. The renewal of the chain “teaching - learning – assessment”, which is the basis of the Student-Centered Learning, is urgently needed. The main ones in this list are the change in teaching methods (changes on the part of the teacher), learning methods (changes on the part of the student), assessment (mutual changes of both parts). There is a need to reorient to active learning, in which students solve problems, answer questions, formulate questions on their own, discuss, explain, debate and carry out brainstorming during the lesson. It is important to have joint training when students work in teams to solve a problem, to implement a project in conditions that ensure both positive interdependence and individual responsibility, as well as the development of inductive learning methods (learning based on situation analysis, problem-based learning, etc.)

Regarding the assessment. It is important not only to change the assessment methods. It is necessary to change the concept of assessment. Assessment is the center of the educational process in the student-centered model. Effective assessment necessarily implies:

- assessment is at the center of the programme development;
- feedback is used to improve student learning;
- students and teachers have become responsible partners in learning and assessment;
- students are introduced into the practice and culture of higher education concerning assessment;
- use to identify what is most productive for students in the learning process;
- assessment for learning is a guideline for staff and institutional development;
- assessment provides a comprehensive and accurate picture of student achievement.

Without this, one cannot hope for the full implementation of the National Qualification Framework and the consequences that it must carry.

Conclusions and recommendations

It is possible to ensure the transparency in the higher education system only if the National Qualification Framework is implemented. We believe that the implementation of the National Qualification Framework cannot be without significant shifts at the level of Higher Education Institutions. We suppose that to ensure the effectiveness of the implementation of the National Qualification Framework it is necessary to structure the tasks – to identify separately the tasks relating to the national level, separately those whose solution relates to the authorities of higher education institutions. Obviously, performance can only be achieved by combining the tasks of both groups.

It is necessary to plan the broad advisory, educational work, at least for members of project groups and guarantors of educational programmes. There should be a wide list of events, workshops, trainings, etc. In the future, it is necessary to prepare a pool of experts (Peer-review experts) from Ukrainian higher education specialists to disseminate good practices and experience of the leading European universities in disseminating learning-outcomes approach, recognition of qualifications, and in the future, participation in external quality assurance procedures in accordance with standard 2.4. Peer-review experts (Standards and Guidelines for Quality Assurance in the European Higher Education Area (ESG), 2015) There is a positive experience of such training. So, within the project “Innovation University and Leadership” a lot of people took part in the training. They are currently not only active in the educational process of their own institutions, but also work at the national level.

The implementation of the National Qualification Framework needs to be considered in a wider context, since the basic aim of its implementation is to promote the mobility of workers and students through the comparability of qualifications and the transparency of their assignment procedures. The implementation of the National Qualification Framework should come from understanding that Education and training policies are central to the Europe 2020 Strategy as it is acknowledged that the “way to go out of the crisis must mean moving to a more competitive economy, which is knowledge based, inclusive and sustainable, giving good employment opportunities for women and men” [3].

EU 2020 Strategy [2] recognises investment in education and training as a priority in order to achieve its main aim of accelerating economic recovery in Europe. “Youth on the Move” and “An Agenda for New Skills and Jobs” are the two (out of seven) flag ship initiatives under EU 2020 that are most pertinent to education, training and qualifications:

- Youth on the Move aims to ‘unleash the potential of young people to achieve smart, sustainable and inclusive growth in the European Union’. It underlines the need for intertwined cooperation between
education and training policies, while aiming to increase the share of citizens with tertiary or equivalent qualifications.

- The Agenda for New Skills and Jobs prioritises ‘flexicurity’ and places emphasis on the role of education and employment policies, both separately and combined, in addressing the adverse impact of the economic crisis on employment and insecurirt growth and competitiveness in the long term by effectively matching skills to jobs.

It is necessary to provide the National Qualification Framework with the status of a truly basic document in the process of assessment, classification and recognition of qualifications. All legislative and regulatory frameworks must be consistent with the National Qualification Framework.
